

Alphalyse

Expert in Protein Mass Spectrometry

Do you want to join a fast growing international biotech company? Alphalyse is looking for a dedicated scientist to join our mass spectrometry laboratory situated in Odense, Denmark. We solve a diverse range of protein characterization tasks for our more than 800 customers all over the world, and are constantly looking to develop new improved protein characterization analyses, using top-of-the-line mass spec equipment.

Job description

We are seeking a protein chemist with expertise in liquid chromatography mass spectrometry (LC-MS/MS) for analytical method development and biopharmaceutical protein characterization. You will be responsible for development of LC-MS/MS methods for identification and quantification of biopharmaceutical proteins. You will work hands-on with protein analysis methods in protein characterization projects, and with project management and communication with clients. You will also be involved in the testing and purchasing of new equipment and bioinformatics software packages.

Your skill, experience and interest:

- PhD-level scientist in protein mass spectrometry
- LC-MS/MS analysis of proteins and peptides
- Hands on with ESI-QTOF and Orbitrap type instruments
- nanoLC and UV-LC systems
- Protein separation techniques
- Bioinformatics database searching for protein identification, relative and absolute quantification using label-free methods, and characterization of post translational modifications
- Knowledge of biopharmaceutical protein characterization
- Knowledge about Quality Control systems (GLP/GMP/ISO)
- Service minded

You have a scientific curiosity and analytical approach, and you have presented your work at scientific meetings, and in power point presentations, posters and papers.

You are a friendly outgoing person with good collaboration and communication skills in English

About Alphalyse

We are a young company with employees who come to work every day because it is exiting, challenging and a fun place to be. Most of our employees have a science background, and we put great efforts in the individual training and development through internal and external training and courses. We earn our living by providing top-class protein analyses to customers all over the world. Our customers use the results we provide, in the development and production of protein based drugs and vaccines.

For more information about Alphalyse and our protein analyses, please visit our website www.alphalyse.com. For more information about this position please contact Ejvind Mørtz, +45 63106504. We would like your application, including CV and personal letter with motivation, as soon as possible and no later than October 1st. 2015.
